ORIGINAL ISSUE DATE: January 28, 2011

EVALUATION CENTER

Intertek Testing Services Ltd., Shanghai Jinqiao Branch Building T52-8, No. 1201 Gui Qiao Road, Jinqiao Development Area, Pudong District Shanghai 201206

RENDERED TO

Jiangsu Xiecheng Science & Deve.Co., Ltd Industrial Zone, Jinhu county Jiangsu, China

SAMPLE EVALUATED:

4 mm fire resistant aluminium composite panel

EVALUATION PROPERTY

Reaction to Fire

Report of 4 mm fire resistant aluminium composite panel for compliance with the applicable requirements of the following criteria: EN 13501-1: 2007+A1:2009

"This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program."

2 Introduction

Intertek Testing Services has conducted testing for Jiangsu Xiecheng Science & Deve.Co., Ltd on fire resistant aluminium composite panel, to evaluate reaction to fire. The testing was conducted at the external approved facility. The classification was in accordance with the procedures given in EN 13501-1: 2002+A1: 2009. This evaluation began on December 27, 2010 and was completed on January 21, 2011.

3 Test Samples

3.1. SAMPLE SELECTION

Samples were submitted to Intertek directly from the client. Samples were not independently selected for testing. Samples were received at the Evaluation Center on December 24, 2010.

3.2. SAMPLE AND ASSEMBLY DESCRIPTION

The samples were identified as fire resistant aluminium composite panel and photographs were presented in Appendix A.

The description of the samples given below has been prepared from information provided by the sponsor of the test. All values quoted are nominal, unless tolerances are given.

General description		A composite comprising an inorganic core surrounded by coated aluminium facings	
Product trade na	ame	ALMINE 4mm 8.12kg/m² (4mm,alu 0.5mmX0.5mm)	
Overall thicknes	S		
Overall density	/ weight per unit area		
	Product reference	PVDF coating	
	Generic type	Polyvinylidene Fluoride (PVDF) Coating	
	Name of manufacturer	PPG	
Facing	Density / weight per unit area	0.93 g/cm ³	
Grange Ca	Thickness	26*10 ⁻⁶ m	
	Colour	Flash silver	
	Application rate per coat	24.18g/m ²	
Aluminium	Generic type	Aluminium	
Substrate	Product reference	3003 H16 Alloy Aluminium	
	Name of manufacturer	OPTION 1	
	Thickness	0.5mm	
	Colour	White	

CLASSIF	Density	2.7g/cm ³		
	Product reference	High Molecular Adhesive Film		
	Generic type	PE me rable relias		
Adhesive	Name of manufacturer	OPTION 1		
	Application rate	0.58%		
	Application method	High temperature melt		
Mar. 2013	Generic type	inorganic		
	Product reference	AL(OH)3		
Core	Name of manufacturer	Jiangsu Xiecheng Science & Deve.C		
	Thickness	3mm		
	Colour	White		
	Density	1.79g/cm ³		
	Product reference	High Molecular Adhesive Film		
	Generic type	PE		
Adhesive	Name of manufacturer	OPTION 1		
	Application rate	0.58%		
	Application method	High temperature melt		
	Generic type	Aluminium		
	Product reference	3003 H16 Alloy Aluminium		
Aluminium	Name of manufacturer	OPTION 1		
Substrate	Thickness	0.5mm		
	Colour	White		
	Density	2.7g/cm ³		

Note: OPTION 1 - The sponsor was unwilling to provide this information.

4 Testing and Evaluation Methods

4.1. HEAT OF COMBUSTION TEST

The test was conducted in accordance with EN ISO 1716. In this test, the test specimen of specified mass is burned under standardized conditions, at constant volume, in an atmosphere of oxygen, in a bomb calorimeter. The heat of combustion determined under the specified conditions is calculated on the basis of the observed temperature rise, taking account of heat loss and the latent heat of vaporization of water.

4.2. SINGLE BURNING ITEM TEST

The test was conducted in accordance with EN 13823. This test evaluates the potential contribution of a product to the development of a fire, under a fire situation simulating a single burning item near to the product.

4.3. CLASSIFICATION CRITERIA

The classification was determined in accordance with EN 13501-1: 2002+A1: 2009. The classes A2 with their corresponding fire performance are given in the table below.

Table- Classes of reaction to fire performance for construction products excluding floorings and linear pipe thermal insulation products

Class	Test Method(s)	Classification criteria	Additional classifications
		PCS ≤ 3,0 MJ/Kg ^a and	Like CD.
	EN ISO 1716	PCS ≤ 4,0 MJ/m ^{2 b}	
	and	PCS ≤ 4,0 MJ/m ^{2 c} and	Contract to
A2		PCS ≤ 3,0 MJ/Kg d	
		FIGRA ≤ 120 W/s and	Smoke production e and
	EN 13823	LFS < edge of specimen and	Flaming
	3 LASON	THR _{600s} ≤ 7,5 MJ	droplets/particles f

Note:

- a. For homogeneous products and substantial components of non-homogeneous products.
- b. For any external non-substantial component of non-homogeneous products.
- c. For any internal non-substantial component of non-homogeneous products.
- d. For the product as a whole.
- e. In the last phase of the development of the test procedure, modifications of the smoke measurement system have been introduced, the effect of which needs further investigation. This may result in a modification of the limit values and/or parameters for the evaluation of the smoke production.
 - $s1 = SMOGRA \le 30m^2/s^2$ and $TSP_{600s} \le 50m^2$; $s2 = SMOGRA \le 180m^2/s^2$ and $TSP_{600s} \le 200m^2$; s3 = not s1 or s2
- f. d0 = no flaming droplets/ particles in EN 13823 within 600 s;
 - d1 = no flaming droplets/ particles persisting longer than 10 s in EN 13823 within 600s;
 - d2 = not d0 or d1.

Ignition of the paper in EN ISO 11925-2 results in a d2 classification.

5 Testing and Evaluation Results

5.1. RESULTS AND OBSERVATIONS

The test results were shown in Table below.

Method	Parameter		Result	
		Facing, MJ/m2	0.5	
		Aluminium Substrate, MJ/kg	0.0	
	Augusty to Magain	Adhesive, MJ/m2	2.1	
EN ISO 1716	PCS	Core, MJ/kg	2.0	
		Adhesive, MJ/m2	2.1	
		Aluminium Substrate, MJ/kg	0.0	
		the whole product, MJ/kg	1.9	
	FIGRA, W/s		0.0	
	THR _{600s} , MJ	0.0		
	LFS		<edge of="" specimen<="" td=""></edge>	
	SMOGRA		1	
EN 13823	TSP _{600s}		34	
		plets/ Particles	No flaming droplets/ particles occur within 600s	

5.1.1. Statement of Measurement Uncertainty

When determining the test result, measurement uncertainty has been considered.

5.2. CLASSIFICATION

The classification has been carried out in accordance with EN 13501-1.

Fire behaviour		Smoke production		Flaming Droplets		ets
A2	-	S	1	-	d	0

Reaction to fire classification: A2-s1-d0

6 Conclusion

The product identified and evaluated in this report has been tested in accordance with EN 13501-1: 2007+A1:2009. The results are presented in Section 5 of this test report and the classification of the sample is as below.

Reaction to fire classification: A2-s1-d0

The conclusions of this test report may not be used as part of the requirements for Intertek product certification. Authority to Mark must be issued for a product to become certified.
